

Connecting to the AWS server

Install PuTTY - you will need puttySSH and putty Gen

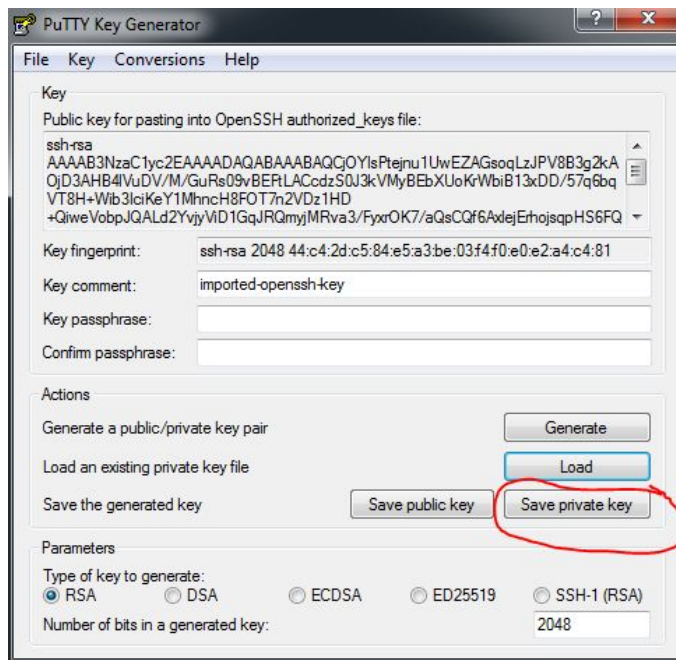

<https://www.putty.org/>

Take the pem file i sent out and load it into putty generator

You will need to change the file type to 'all' to load in the pem.

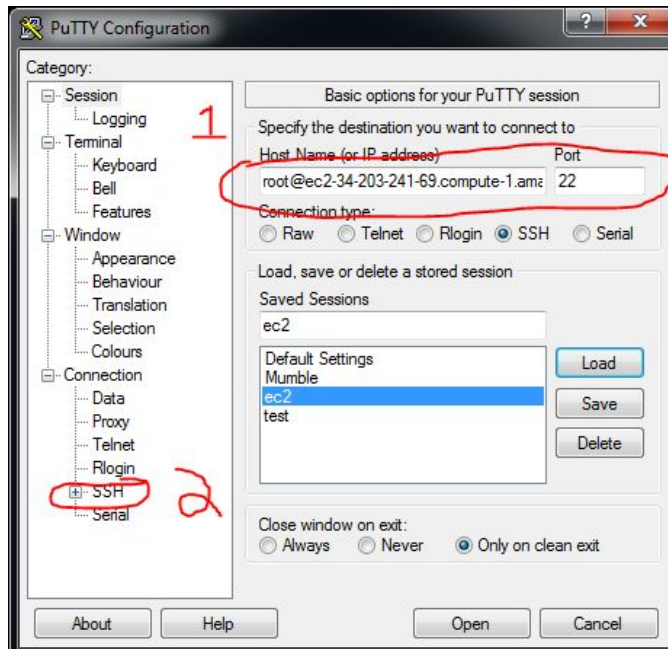

Now save as a private key

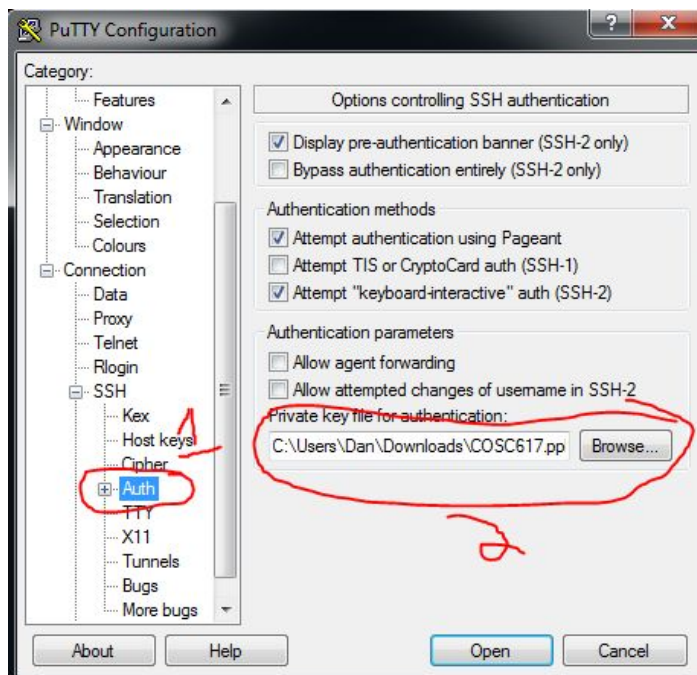

Open up putty and paste in the Host Name:

root@ec2-34-203-241-69.compute-1.amazonaws.com

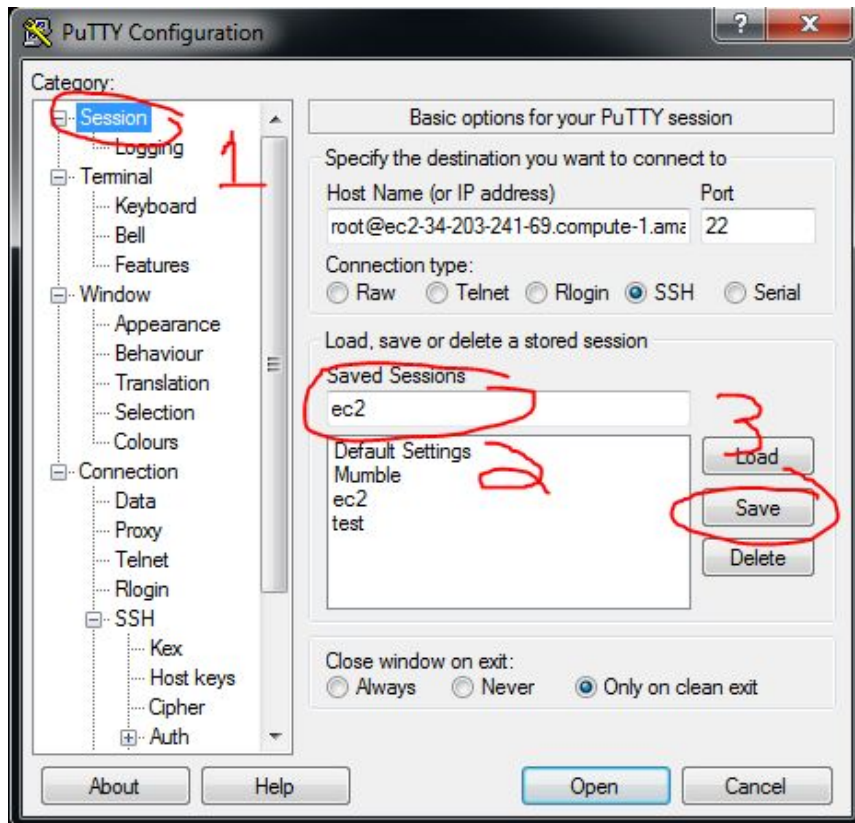

Then open expand the SSH tab

Click on 'Auth', then browse to the PPK we just saved and load it in

Finally, , back on the session tab, give your session and name and save the configuration

You should now be connected to a Centos 6 AWS box!
